

INSTRUCTIONS

Concrete Washout Warden - Filter Bag Instructions

STEP 1 - Place the Washout Warden over concrete mixer chute pins.

STEP 2 - Handles can be re-looped over chute pins to obtain a closer fit.

STEP 3 - Use the mixer truck hose to wash gravel, sand and cement residue into the Washout Warden.

STEP 4 - Once water has drained, dispose of the Washout Warden and its contents in an onsite waste bin. Alternatively it can be transported back to the concrete plant for disposal.

OPTIONAL - Carabiners are available by request as an alternate means of securing the Washout Warden to chutes and extenders.

Please note that while the filter bag will reduce contamination, concrete waste water is alkaline and should be kept away from drains and environmentally sensitive areas.
