

ABOUT

Concrete Washout Warden - Filter Bag

The Stratex Washout Warden provides a quick and convenient solution to contain concrete washout waste during onsite concrete mixer clean up. Gravel, sand and cement residue is contained as waste water filters through the Washout Warden.

The Washout Warden can be attached to the concrete mixer chute using the straps as pictured (optional carabiners also available).

INDUSTRY

The Washout Warden is ideal for use in Civil, Road and Commercial construction applications.

USAGE

Washout Warden is suited to residential and inner city pours where washout waste must be captured and removed before leaving the site. Please note that while the filter bag will reduce contamination, concrete waste water is alkaline and should be kept away from drains and environmentally sensitive areas.

SPECIFICATIONS

- Heavy duty geofabric construction
- High strength wrap-around poly straps
- Reinforced stitching
- Size: 400mmL x 400mmW x 500mmH
