

ABOUT

Blackhawk - Advanced Inlet Filter Mat

A sediment control solution designed to prevent flooding and is easy to install and service

The Blackhawk Sediment Filter Mat makes drain protection simple. It Magnetically attaches to stormwater inlet grates, and vertically aligned coir fibres of the Blackhawk Filter Mat create a high flow, extremely effective sediment and debris filter.

Scalloped edges and top surface inlet ports create an exceptionally large filtration surface that practically eliminates sediment and dramatically reduces the chances of street flooding.

The Filter Mats are strong enough to withstand being driven over by machinery and trucks, making them superior to the traditional silt socks which often split.

Independent lab tests indicates that the Blackhawk Inlet Filter Mat to be highly effective protection against sediment and debris clogging storm water drains and prevent flooding. Toolless installation, easy maintenance and reusability make the Blackhawk Filter Mat the simple, reliable and cost-effective drain protection solution.

PERFORMANCE

- 4,920L/min hydraulic flow rating
- Removes 99% .425 mm particle size and larger
- Independent testing shows 87% overall sediment removal
- Compatible with box and side entry drains
- Custom sizes available by request

OTHER BENEFITS

- Easy to handle - Installs by just laying on the grate
- Can be cleaned and re-used
- Made from coir fibres - biodegradable
- Can be used for environmental protection compliance
- Greater sediment storage capacity than bags
- Designed to be highly resistant to blinding and flooding
- Integrated emergency dewatering plugs
